Use case from template

Web scraping information from a site.
Using HTTP Request, Playwright

The screenshot displays the n8n workflow editor for a project titled "Web scraping using HTTP Request, Playwright". The workflow consists of the following steps:

- When chat message received**: Triggered by a chat message.
- Extract URL**: Extracts the URL from the chat message.
- HTTP Request**: Sends a POST request to `http://localhost:3000/...`.
- Clean Extraction**: Cleans the extracted data.
- Basic LLM Chain**: Processes the cleaned data using a Basic LLM Chain.

The chat window shows the following interaction:

URL: `https://books.toscrape.com` Task: Extract all product information.

```
{
  "products": [
    {
      "title": "A Light in the ...",
      "price": "£51.77",
      "availability": "In stock"
    },
    {
      "title": "Tipping the Velvet",
      "price": "£53.74",
      "availability": "In stock"
    }
  ]
}
```

The logs window shows the execution of the "Clean Extraction" step, which was successful in 13ms. The input and output are as follows:

INPUT		OUTPUT	
task	url	task	url
Extract all product information.	<code>https://books.toscrape.com</code>	Extract all product information.	<code>https://books.toscrape.com</code>

Document QnA Generation agent

Valid question asked to the agent related to uploaded document

The screenshot displays the n8n workflow editor for a 'Document QnA Agent'. The workflow consists of four nodes: 'When chat message received', 'Read/Write Files from Disk', 'Extract from File', and 'Basic LLM Chain'. The 'Basic LLM Chain' node is highlighted, showing its configuration with a 'Model' dropdown set to 'Grok Ch...'. Below the workflow, the chat interface shows a session with ID 'baa48...'. The user's input is 'can i use date tag in html specifically?'. The agent's response is: 'The <time> tag is used in HTML to mark a specific time or date. The datetime attribute is used to specify the machine-readable version of the time or date. For example: <time datetime="1963-11-23T12:16:20Z">Premiere'. The output section shows the generated HTML text.

Session: baa48...
Success: 4,347...
Basic LLM Chain Success in 1.206s | 4,347 Tokens

INPUT: can i use date tag in html specifically?

OUTPUT: text
The 'img' tag in HTML is used to embed an image that's important to the content. The 'src' attribute specifies the path to the image file, and the 'alt' attribute describes the image if it cannot be seen. The basic syntax is: . For example: . Additionally, the 'img' tag can be used within a 'figure' element to provide a caption for the image: \n <figure>\n \n <figcaption>So many dinosaurs I can't even count!</figcaption>\n </figure> \n \n It's also worth noting that the 'picture' element can be used for responsive image insertion, allowing developers to provide different images for different contexts: \n <picture>\n <source media="(min-

Out of context question asked

The screenshot displays the n8n workflow editor for the same 'Document QnA Agent'. The workflow is identical to the previous one. The chat interface shows a session with ID 'baa48...'. The user's input is 'who won the fifa world cup 2026?'. The agent's response is: 'The requested information is not available in the uploaded document.' The output section shows the generated text.

Session: baa48...
Success: 4,108...
Basic LLM Chain Success in 603ms | 4,108 Tokens

INPUT: who won the fifa world cup 2026?

OUTPUT: text
The requested information is not available in the uploaded document.
